GD10P

IR Point Gas Detector

Fast reliable response
No field recalibration
Solid state IR-source

The Simrad GD10P detector is the benchmark for combustible gas detection on offshore installations. It has set the standard for gas detectors in the areas of safety, stability and low maintenance. GD10P comes with 5 years warranty.

SIL2
IEC 61508

The GD10P has been designed with features that provide an effective response to the detection of gas hazards in a wide range of industrial environments from boiler plant rooms to offshore petrochemical installations.

These infrared gas detectors differ from all other models, because they utilise silicon based solid-state infrared sources. The complete optomechanical design and construction is so stable that an ultra fast speed of response can be achieved whilst providing unparalleled service life and detector stability, thus saving on maintenance and service costs.

We offer the longest combined detector and IR source warranty on the market.

For retrofit applications, a bridge interface is available allowing the detector to be connected directly to catalytic systems, using the existing cabling and control modules.

Supplied with worldwide performance and hazardous area approvals. Suitable for use in SIL 2 systems.

An industry standard HART interface is used for configuration of the optional fast response time and special fault levels as well as access to extended maintenance data.

Features	Benefits
Solid state IR sources (SimSourceTM)	Superior long term performance compared to filament lamps
High IR source flash rate	Improved stability and speed of response
True dual path, double compensation optical design	No recalibration, monitors and accounts for all changes in optical path
Selectable response rate	Fastest IR point detector on the market, ideal for speed critical applications
Dual layer weather protector	No mesh, gauze, hydrophobic filters or sinters = No delay, no failure on demand
Early dirty optics warning	Improved preventative maintenance
Integral termination compartment	Reduced installation time, the unit is ready out of the box
Low power consumption	Reduces load on UPS
Independently heated mirror and lens	High performance detection in rough environmental conditions
